- Coffee Cups
- Glass
- Liquids or Grease
- Paper Products
- Styrofoam®
- Milk or Juice Cartons

Still edible? Donate your leftover food.

Clark County Food Bank partners with many local agencies to help serve food to families in the community. Edible food donations from businesses help make this possible. If your business has excess edible food, please consider donating before composting. Visit clarkcountyfoodbank.org to find a partner agency near you.

Why Compost?

According to the USDA, food is the largest component of all waste being sent to landfills.

Almost half of the total waste generated from Clark County businesses is food. By separating food waste from your garbage you create a valuable soil amendment called compost.

Composting helps stimulate the local economy and also reduces harmful green house gases.
