How to Use a Plastic Bag to Line Your 64 Gallon Roll Cart

You can use plastic bags to line your roll cart. It is extremely important that no other plastic bags make their way into the cart. **Only food waste goes into the truck.** The bags that fit this size of container are larger than a typical lawn bag and need to be specially ordered. Bag specifications are on the back.

If your cart does not already have a rubber tube attached, request as many as you need through Waste Connections Customer Service. Rubber bands are free of charge. They must be attached to the cart, not just put around the top. Attach as shown below.

After your rubber tube is attached to your cart, make sure that the bag is tucked securely beneath it as shown below.

Your food waste cart can now be emptied without the bag falling into the food waste truck. After it is emptied, remove the used bag and place it in the trash. Line the cart with a fresh bag.

Bag Ordering Information:

Bag size: 48" x 60"

Bag thickness: 2 mil
