

Please, no glass in recycling carts!

Glass breaks into very small pieces and gets embedded in paper that is sent to local paper mills. The glass pieces act like sandpaper and do thousands of dollars worth of damage to equipment.

Please help us by NOT including glass in your mixed-recycling carts. Always place glass in a separate “Glass-only” container for recycling collection.

Outside view of a typical valve used to control pulp in a paper mill.

Inside view of valve showing heavily damaged (pitted) areas (Inside of valve needs to be smooth and damage-free to work correctly.)
